

MCIR Release Highlights

January 2018

Featured in this Issue

1. MenB Assessment RELEASED
2. Update on myHealthButton/myHealthPortal access project

NEW: Meningococcal Group B Vaccine (MenB)

MenB is in MCIR Production on January 24th!

Here is some information on the features:

- 1) MenB is listed as a general routine vaccine series for 16 through 23 years with due date of 16th birthday (after MMWR October 23, 2015 date)
- 2) If no history of MenB vaccine, will be displayed as "MenB Category B" on the status screens, with verbage "Discuss/Due Now" (instead of eligible, due)
- 3) After dose 1 is given, MCIR will forecast dose 2 based on what MenB brand product was given
- 4) If both product brands have been given as dose 1 and dose 2, it will forecast final dose based on the last dose given product
- 5) MCIR will display doses given at 10 years and older under Other Administrations –there is no second dose forecasting for this age group at this time (MCIR will not forecast for patients with high risk indications)
- 6) Does not impact overall status
- 7) A '?' link (hover over '?' to see link) **was added** for DCH MenB quicklooks pdf document **on Gen Info and Status displays for MenB**

*The January Release **does not** have the ability to **do a second dose Recall**. This is planned for a later release and will be announced when available.*

PLEASE SHARE through redistribution within your organization this newsletter!

If you are fortunate to receive it directly from MCIR, remember that there are others in your organization that could also benefit from the information!

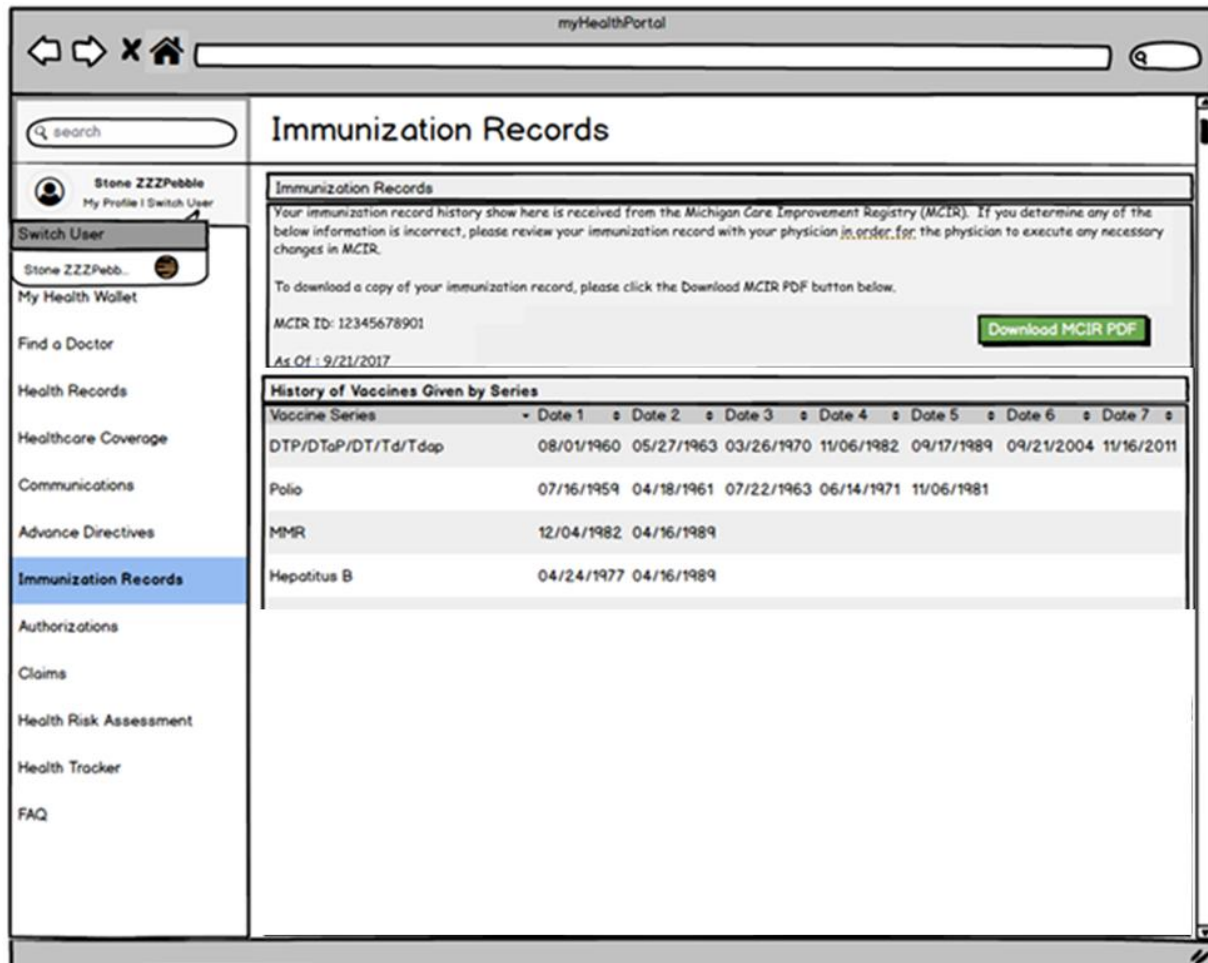

UPDATE: myHealthButton/myHealthPortal

(mHB/mHP) – Medicaid Beneficiaries ability to obtain their own or their dependent's immunization information from MCIR via nHB/mHP is proceeding but will be split across two releases in 2018.

The first mHB/mHP release is scheduled for March 23, 2018 and will include the display of Immunization History information and a button in order for the beneficiary to be able to print the Landscape PDF document of the MCIR record.

MCIR Release Highlights

January 2018

Above is an artistic rendition of what the Medicaid Beneficiary will see when they engage the Immunization Records tab on the myHealth Portal. The same information will be accessible on the myHealthButton (for smartphone or tablet devices).

Should a person's IMMS history exceed seven dose dates, only the most recent seven doses will display (i.e. seasonal influenza). **Forecast information will only be available via the Landscape PDF document.**

MCIR is working with the mHB/mHP Team to have the Forecast display screens completed for the mHB/mHP December 2018 release. The mHB/mHP Team desires to have this release also contain the ability to send Alerts to the beneficiary for when they are due for vaccines. MCIR will be working closely with them on the Alert message content and delivery timing.

More information will be shared as this development proceeds in 2018.
