

# Scenario 1

- Patient is 65 years of age or older
  - Patient has no previous pneumococcal vaccine doses
    - Or patient has unknown history of pneumococcal vaccination
1. Administer one dose of PCV13
  2. Wait 6-12 months; administer one dose of PPSV23

# Scenario 2

- Patient is 65 years of age or older
  - Patient has documentation of PPSV23 given at age 65 years or older, but patient has no documentation of PCV13
1. Wait 1 year after last PPSV23 dose; administer one dose of PCV13

# Scenario 3

- Patient is 65 years of age or older
  - Patient has documentation of 1 (or 2) doses of PPSV23 before age 65, but no history of PPSV23 at/after age 65 years and no history of PCV13
1. Wait 1 year after last PPSV23 dose; administer one dose of PCV13
  2. Wait 6-12 months; administer PPSV23 if it has been at least 5 years after the last dose of PPSV23

# Scenario 4

- Patient is 65 years of age or older
- Patient has documentation of PCV13 given before age 65, but patient has not received PPSV23 at/after age 65 years
  1. Do not give any dose of PCV13 at/after age 65 years
  2. Wait 6-12 months after PCV13 and at least 5 years after PPSV23; administer one dose of PPSV23
